

Using FLDL

Use the Colleague File Export (FLDL) form to export, or download, a file from Colleague to your local computer.

FLDL is a two-step process. First, you tell it where the Colleague file is:

The screenshot shows the 'FLDL - Colleague File Export' form. The form has three input fields: 'Source Directory' with the value '_HOLD_', 'Source File Name' with the value 'kt.txt', and 'Execute Download' with the value 'Yes'. Red circles highlight each of these fields. Red arrows point from text boxes to these fields. The text boxes contain the following instructions: 'The source directory for most purposes is _HOLD_', 'The source file name is the name of the Colleague file that you want to download. It is case sensitive.', and 'Enter "Y" to download the file'. The browser's address bar shows 'FLDL: Colleague File Export' and the page title is 'FLDL - Colleague File Export'. The browser's menu bar includes 'File', 'Options', and 'Help'. The browser's toolbar includes 'Auto-Close Context', 'Save', 'Save All', 'Cancel', and 'Cancel'.

The screenshot shows a 'Download File' dialog box. The text inside the dialog box reads: 'The system is requesting permission to save a file to your computer. Choose Save As to save the file or Cancel.' There are two buttons: 'Save As' and 'Cancel'. The 'Save As' button is circled in red. A red arrow points from a text box to the 'Save As' button.

The screenshot shows a 'File Download - Security Warning' dialog box. The text inside the dialog box reads: 'Do you want to save kt.txt'. There are two buttons: 'OK' and 'Cancel'. The 'OK' button is circled in red. A red arrow points from a text box to the 'OK' button.

Using FLDL

Then, you tell it where you want to put the file:
